Challenge Prompt

My computer said I needed to update MS Teams, so that is what I have been trying to do...

...but I can't seem to get past this CAPTCHA!

⚠ CAUTION

This is the **Malware** category. Please be sure to approach this challenge material within an isolated virtual machine.

ℹ NOTE

Some components of this challenge may be finicky with the *browser-based* connection. You can still achieve what you need to, but there may be some more extra steps than if you were to approach this over the VPN.

(i.e., "remove the port" when you need to... you'll know what I mean 🤪)
